PROFILE

Engineer in Data Science and Artificial Intelligence, graduating from Polytech Clermont in September 2026, with experience in both industrial settings and international research. Skilled in Machine Learning, large-scale data analysis, computer vision, and Python pipeline development.

EDUCATION

2023 – present	Master's in Applied Mathematics and Artificial Intelligence, Polytech Clermont - Track focused on Data Science and Artificial Intelligence, with hands-on application to industrial and research projects. - Core coursework: Machine Learning & Statistical Learning, Deep Learning, Applied Statistics & Mathematical Modelling, Big Data & Data Science. - Engineering degree in Applied Mathematics and Artificial Intelligence.
2024 – 2025	Bachelor's in Mathematics (parallel degree), Université Clermont Auvergne
2021 – 2023	Preparatory Classes (CPGE) MPSI/MP, Lycée Saint-Exupéry

EXPERIENCE & PROJECTS

Sept. 2026 – Present	Document Archiving Automation, Data Scientist — Freelance · AXC (Assurance X Conseil) - An insurance brokerage was manually sorting and archiving thousands of emails (contracts, client correspondence, attachments), with no standardized naming or usable structure — risking lost documents and making audits hard to trace. - Built a Python pipeline connected to the Gmail API to automate this sorting and archiving, with standardized naming and automatic filing by date. - Delivered a turnkey tool, fully local with no third-party cloud service, deployed directly on the client's machine with scheduled-task automation.
Feb. 2026 – Aug. 2026	Data Analyst & Big Data Engineer — End-of-studies Internship, OPmobility · Compiègne - Designed and deployed an end-to-end Python pipeline (extraction, CAN frame decoding, anomaly detection) to automate diagnostics of high-voltage batteries on Alstom trains, replacing an analysis that was until then manual, slow, and dependent on individual calibration engineers' expertise. - Cut anomaly assessment time from 1 hour to under 5 minutes, by structuring BMS diagnostics around clear indicators rather than raw data inspection. - Automated daily dashboard generation via a scheduled Windows task run at startup, making BMS monitoring available every day with no manual intervention.
Mar. 2025 – Aug. 2025	Data Science Research Internship — Sport Analytics, Linköping University · Sweden - Proposed and led a research project analyzing football playing styles based on home/away context, across the full 2022–2023 Premier League season (380 matches). - Built a complete ETL pipeline and a methodology combining an ELO rating system, clustering, and Random Forest classification to reveal distinct tactical profiles, achieving 85% accuracy on player roles. - Wrote a full research report in English within a fully international environment, with findings showing that home advantage is not explained by venue alone, but by a combination of contextual factors.

SKILLS

Technical	Professional proficiency: Python, SQL, Machine Learning & Deep Learning (scikit-learn, PyTorch, TensorFlow, Keras) Tools & environments: Docker, Git, PostgreSQL, Databricks, SVN Visualization & analysis: Power BI, Grafana, Streamlit, Plotly, Matplotlib, Seaborn Programming languages: Python, SQL, R, C/C++, Java, HTML/CSS/JavaScript
-----------	--

LANGUAGES

French — native speaker
English — TOEIC: B2 level, Advanced
Spanish — academic level
